

## Cohesia 8.2 Target Platform

This document gives the target platform information for version 8.2 of the Cohesia® product. Final testing and certification are done against these target platforms. Higher versions and service packs may work depending on component vendor claims of compatibility. For customers for whom Cohesia is providing first or second level support, please keep us informed of any upgrades so that we can monitor for new production defects related to version upgrades.

Cohesia 8.2 Target Platform

Component	Hardware	Software			Notes
		Name	Version	Patch or SP	
Web Server		Apache	2.0.x		Clustering/failover requires a web server supported by BEA's Weblogic 8.1 SP4.
		Microsoft IIS	5/6		
		SunOne (iPlanet)	6	SP 5	
Web Application Server		JBoss	4.0.1	SP1	No Clustering/Failover Support.
		WebLogic Server/Express	8.1	SP 4	With JVM 1.4.2_05 (included with SP4).
IntelliDoc Server	Pentium Family	Windows 2003 Server			JRE 1.4.2_05 installed for install and maintenance utilities.
		Oracle9i Client	9.2.0.5		See note 2 below
Database Server		Oracle RDBMS 9i	9.2.0.5		
End User Workstation	Pentium Family	Windows 2000/XP SP2 with Internet Explorer	6.0	SP1	See note 1 below
SpecStudio	Pentium Family	Windows 2000/XP SP2			JRE 1.5.0_06 installed with application.

**Note 1** - Any IE user who has applied critical update 832894, must also have patch Q831167 applied to correct the defects introduced in the update. Running with the update but not the patch results in occasional HTTP 500 or servlet null pointer exception errors with loss of the user session.

**Note 2** - We have seen some Oracle problems with importing and exporting tables with LOB content in client versions earlier than 9.2.0.5.
